

An enterprise foundation for content, work, and process.

Businesses today are powered by information, people, and processes. Yet how effectively these elements are integrated to support corporate goals and initiatives determine an organization's competitiveness and its ability to deliver value.

Many of the most common and mission-critical business processes involve lots of content, both paper-based and electronic. Content-based process examples require careful coordination and collaboration between people spanning multiple business functions, include customer correspondence processing, new account enrollment, health insurance claims processing, and mortgage application document archiving.

The predominance of content in process presents a still-growing business challenge requiring an enterprise-class solution. A solution combining the power of content and process that substantially improves the availability and agility of critical information assets in both business functions and processes.

Global 360's Execute360 is a powerful process solution that provides industry-leading capture, imaging, content, and work management. Moreover, Execute360 is fully integrated with Insight360, which augments the value of process solutions with historical and real-time analytics and optimization services.

Execute360 streamlines business operations by managing process lifecycles, automating mission critical applications, and optimizing business processes. Execute360 also provides robust document lifecycle management capabilities, enabling substantially improved availability and agility of the critical information assets within your business processes.

End-to-End Document Lifecycle Management

Execute360 provides an end-to-end document lifecycle management solution for the capture, management, storage, and delivery of all critical information assets, including business workflows and collaborative processes.

Execute360's powerful and high-volume imaging and management capabilities improve operational efficiency and productivity by enabling documents and files to be captured and managed in an integrated manner.

EXECUTE360: Powerful Content and Process Management

- » HEAVY-DUTY PROCESS EXECUTION: Run critical business processes that are reliable at any workload, delivering documents rapidly for efficient processing.
- » IMAGING AND CAPTURE: Capture huge volumes of documents that drive business processes from scan, fax, email, electronic capture, and desktop applications.
- » HIGH VOLUME DOCUMENT MANAGEMENT: Manage documents seamlessly within business processes and across distributed architectures.
- » STORAGE AND ARCHIVAL: Store, secure, archive, retrieve, and destroy documents as demanded by the business and according to record keeping policies.

Execute360 supports multiple capture sources including e-mail, fax, scanners, and batch XML import. Once content is in the system, Execute360 Archive Manager provides seamless access to online, nearline, and offline document storage. Information can be retained long term on optical, magnetic, EMC Centera, or NetApp SnapLock devices while continuing to be accessible by an Execute360 business process.

By integrating critical content with business applications and processes, organizations can dynamically manage their content-related work and business processes for improved business responsiveness and operational efficiency.

Execute360 also includes powerful APIs that enable integration with proprietary sources, giving you the ability to develop tightly integrated and customized applications within all levels of your environment.

A Highly Scalable Process Platform

Global 360's Execute360 has distinguished itself as a run-time process execution engine. Organizations that have deployed Execute360 for high-volume requirements have successfully executed over 230,000 user transactions per hour. Additionally, Execute360 has been performance tested at 16 million server transactions per day and over 1 million images per day.

With Execute360 as their process backbone, hundreds of the world's largest companies have a powerful, end-to-end solution that provides complete visibility and control, while offering a high-volume environment that scales to meet the needs of a growing enterprise. Using Execute360, processes can be defined, visualized, measured, controlled, automated, and optimized. With Execute360 you can:

- » Link business goals and strategy to process execution
- » Leverage on-demand access to relevant and actionable information
- » Accelerate responsiveness to business or transaction events with repeatable and automated processes
- » Quickly adapt processes to changing market needs to optimize competitive advantage
- » Gain a competitive advantage

Execute360 lets organizations translate strategies into actions, automate processes, and gain the insight and vision to keep them nimble, informed, and able to make the best business decisions with confidence.

Powerful SOA Capabilities

Execute360 supports service-oriented architectures (SOAs) with the following powerful features:

- » SOA process orchestration
- » XML management
- » Web services
- » Reliable messaging
- » Integration
- » Metadata storage
- » Content
